Hi Rashmi,

Please let me know when is a good time to call you this morning. I want to know if you have a timeline for submission of data to support the emergency exemption related to the registered alternatives (flupyradifurone and cyantraniliprole), and when and how the growers use them in the spray rotation?

If they are not used detail why (one of the alternatives is not available due to supply issues). Finally, discussion of the other neonics, imidacloprid and thiamethoxam. It is helpful to know when these are used in the rotation when clothianidin is available in the S18 program. How do the growers adjust when clothianidin is not available and what is the outcome?

Thanks,

Stacey
